Supplementary Figure S3. Genomic profiling of patients. Variant Allele Frequency plots from WGS for \textit{bona fide} breast cancer drivers and ER+ BC ET resistance drivers for patient 1 (a), known pan-cancer drivers other than breast cancer for patient 1 (b) and patients 2-5 (c). Variants are labelled and highlighted according to detection in pre-treatment (teal), progression (magenta), relapse (purple) or both (grey). Labelled genes passed FATHMM significant score >0.6 (predicted damaging). \textit{Bona fide} breast cancer drivers (Intogen) and ER+ BC ET resistance drivers (Bertucci \textit{et al.}) are highlighted and boxed respectively.
